**RJN Group, Inc. Selected for Assessment for the
City of Southlake, Texas**

Wheaton, IL (January 7, 2008) – RJN Group, Inc. was selected to perform a wastewater collection system assessment for the City of Southlake, Texas. RJN's responsibilities include system wide flow monitoring and modeling. Manhole inspection and GPS surveying will also be performed at all manholes in the collection system. In areas where infiltration and inflow (I/I) is excessive, as determined from the flow monitoring results, RJN will perform smoke testing, dyed water flooding, and CCTV inspection to determine the location of defects. RJN will make recommendations to the City of rehabilitation required to effectively operate and maintain the collection system. The flow data will also be used to calibrate the model of the system (10-inch and larger diameter lines) to determine capacities during dry and wet weather periods. The assessment will help the City to more effectively operate and maintain their collection system and eliminate I/I which will save the City money in treatment costs. The assessment began in March 2008 and is scheduled for completion in October 2010.

RJN Group, Inc. provides engineering consulting services for municipal, county, state, and federal infrastructure systems. The firm's offerings include the study, design, and construction management of wastewater, water, stormwater, roadways, and bridges. GIS and asset management services are also offered by the firm. RJN, established in 1975, is headquartered in Wheaton, Illinois with offices nationwide.
